

Draft Evolution Ledger of Malone Doctrine

Purpose of This Ledger

This ledger records the development of Malone Doctrine from an implicit personal ethical code into a formal system of normative authority, interpretation, institutional implementation, and historical preservation.

Its purpose is to document:

- what architectural decisions were made;
- why each decision became necessary;
- which earlier concepts were retained, refined, relocated, or abandoned;
- how each component relates to the current system;
- which version presently controls;
- what work remains incomplete.

This ledger is a provenance document. It does not independently create normative authority. Where it conflicts with the current text of Malone Doctrine, the current Doctrine controls.

Ledger Status Terms

Proposed — Discussed but never formally incorporated.

Adopted — Accepted as part of the working architecture.

Refined — Retained but clarified, narrowed, expanded, or reorganized.

Relocated — Retained but moved to a different institutional or documentary location.

Superseded — Replaced by a later design and no longer controlling.

Deferred — Preserved for possible later development but not presently active.

Current — Part of the present working architecture.

Part I — Foundational Development

Entry 1 — Implicit Ethical Operating System

Earlier condition:

Malone Doctrine began as the founder's largely implicit political, social, economic, and ethical operating system.

The standards existed through personal judgment, conduct, institutional practice, and recurring positions, but they had not yet been reduced to a complete written structure capable of functioning independently of continuous personal access to the founder.

Problem identified:

- Future leaders could misstate the founder's beliefs.
- Different Malone institutions could develop incompatible standards.
- Personal access could be mistaken for authority.
- Outside political factions could appropriate Malone identity.
- Later generations could dispute original meaning.
- Institutional decisions could be rationalized after the fact rather than governed beforehand.

Development:

The implicit code began to be converted into a permanent body of written authority.

Current status:

Retained and foundational.

Malone Doctrine remains the formal codification of the founder's ethical operating system. Its purpose is not merely to explain earlier conduct but to govern future conduct and restrain Malone authority. The earlier operating overview identifies this conversion into a durable framework as a central function of the Doctrine.

Entry 2 — Institutional Supremacy

Earlier condition:

Malone Doctrine initially existed among several Malone projects and institutional programs.

Development:

The relationship was clarified so that Malone Doctrine no longer appeared to be merely one project among many.

Adopted position:

Malone Doctrine is the supreme ethical authority of the Malone institutional system.

Malone institutions exist to serve the Doctrine. The Doctrine does not exist merely to legitimize decisions already made by subordinate institutions.

Current status:

Current and controlling.

All Malone organizations, programs, policies, publications, officers, and authorized representatives remain subordinate to Malone Doctrine within its jurisdiction.

Entry 3 — Separation from the Defense Department

Earlier condition:

Malone Doctrine was previously situated within the Defense Department alongside operational or security-related programs.

Problem identified:

This placement risked narrowing the Doctrine into a defense philosophy or confusing ethical instruction with military, security, or threat-response training.

Development:

Malone Doctrine was moved into the Ethics Department.

Result:

- Malone Doctrine provides ethical authority and moral instruction.
- The War College provides military education and soldier training.
- Situational Awareness provides modular threat-awareness instruction.
- Other operational divisions may consult Doctrine without becoming part of it.

Current status:

Current.

The move expanded the Doctrine's responsibility while preserving distinctions between ethics, military instruction, situational awareness, and institutional operations.

Part II — Scope and Domain Architecture

Entry 4 — Earlier Six-Part Volume I Model

Earlier model:

An earlier version of Volume I contained six major parts:

1. Foundations of Conduct

2. Diagnosis of Community Breakdown
3. Code of Personal and Family Conduct
4. Community Operating System
5. Path to Upward Mobility
6. Strategic Horizon

This structure mixed ethical assumptions, social diagnosis, behavioral standards, operational systems, economic strategy, and future planning.

Value retained:

The earlier material remains a substantial conceptual reservoir. It contains useful research questions, tactical concepts, community analysis, and implementation ideas.

Problem identified:

The architecture attempted to answer too many questions within one doctrinal volume and blurred the distinction between:

- ethical code;
- social analysis;
- strategy;
- policy;
- implementation;
- research.

Development:

The six-part model was retained as historical and developmental material but ceased to define the current four-volume structure.

Current status:

Superseded as the controlling volume architecture; retained as provenance and source material.

Entry 5 — Four-Volume Ethical Domain Model

Development:

Malone Doctrine was reorganized into four progressively expanding ethical fields.

Volume I — Conduct Toward Individuals

The ethics of interpersonal conduct, including dignity, truth, responsibility, trust, discipline, reciprocity, protection, accountability, influence, and boundaries.

Volume II — Conduct Toward Institutions and Communities

The ethics of collective organization, leadership, membership, loyalty, governance, correction, legitimacy, institutional support, reform, opposition, and replacement.

Volume III — Conduct Toward Government

The ethics of citizenship, political authority, law, legitimacy, public administration, rights, duties, government accountability, cooperation, and ethical resistance.

Volume IV — Conduct Within the Economy and Commercial Markets

The ethics of labor, ownership, capital, production, enterprise, competition, stewardship, wealth creation, commercial conduct, and the obligations attached to economic power.

Rationale:

The sequence moves outward from the smallest civil relationship to larger systems of organized power.

Current status:

Current.

Later volumes must build upon rather than contradict the ethical foundations established in earlier volumes.

Part III — Normative and Explanatory Separation

Entry 6 — Separation of Normative Code and Explanatory Code

Date status:

This separation was established before the present regulatory-framework session. It was not created by the regulatory framework.

Earlier problem:

Normative commands, historical analysis, research, commentary, arguments, examples, and implementation guidance risked being mixed into the same body of material.

Adopted distinction:

Malone Doctrine

The authoritative normative code.

Malone Primer

The explanatory body that interprets, contextualizes, preserves, and applies the Doctrine.

Development during the current session:

The earlier separation was restated and refined so that it fits more clearly within the new regulatory architecture.

The regulatory framework does not cause the separation. It makes the boundary easier to identify, administer, cite, and preserve.

Current status:

Current; earlier decision refined rather than newly created.

The distinction remains:

The Doctrine declares the governing standard. The Primer explains why the standard exists, what conditions it addresses, how it developed, and how it may be understood or applied.

The earlier operating overview already recognized the Library as the normative reference system and the Ethics Department and Malone Primer as the location of larger explanatory works.

Entry 7 — Library and Ethics Department Architecture

Adopted structure:

Malone Global University Library

The Library serves as the permanent lookup location for authoritative normative code.

It is intended to make governing provisions easy to:

- locate;
- quote;
- compare;
- cross-reference;
- teach;
- apply;
- audit;
- revise.

Ethics Department

The Ethics Department houses the Malone Primer and related explanatory works.

These may include:

- essays;
- historical analysis;
- research;
- arguments;
- case studies;
- applications;

- strategic analysis;
- implementation examples;
- drafting explanations;
- development accounts;
- revision history;
- provenance records.

Current status:

Current.

The Library–Department distinction expresses the deeper Doctrine–Primer separation through institutional website architecture.

Part IV — Evolution of the Authority Hierarchy

Entry 8 — Initial Hierarchy Including Articles and Definitions

Earlier hierarchy:

1. Axioms
2. Articles
3. Principles
4. Definitions
5. Rules
6. Authorized Commentary and Interpretations
7. Implementation Documents

A later production sequence was also stated as:

Axioms → Principles → Definitions → Rules → Articles

Purpose of the earlier model:

The model attempted to place all major doctrinal components into one chain of authority and production.

Problems identified:

- Articles are containers rather than a distinct form of normative authority.
- Definitions perform an interpretive function rather than a uniform hierarchical function.
- Maxims and procedures had no formally acknowledged place.
- The hierarchy mixed normative provisions, interpretive material, document containers, and implementation instruments.
- Articles could not logically possess a fixed rank while containing provisions of several different ranks.

Current status:

Superseded.

The earlier operating overview accurately records this prior stage, including the tentative role of Definitions and the concept of Articles emerging after Principles and Rules.

Entry 9 — Removal of Definitions

Earlier concept:

Definitions were proposed as provisions attached to Principles or groups of Principles to establish the controlling meaning of disputed terms.

Development:

Definitions were never fully implemented as an independent component of the Doctrine.

Reason for removal:

A separate Definitions category was narrower than the function ultimately required.

The Doctrine needed a system capable of preserving:

- intended meaning;
- reasons for adoption;
- historical conditions;
- drafting intent;
- changes between versions;
- rejected interpretations;
- later authoritative applications.

Replacement:

Authorized Commentary and Interpretations absorbed the intended function of Definitions and expanded beyond it.

Definitions may still appear as ordinary explanatory language when necessary, but they no longer constitute a separate doctrinal rank or formal framework component.

Current status:

Superseded and removed.

Definitions existed as a planning concept rather than an established body of code.

Entry 10 — Addition and Formal Recognition of Maxims

Earlier condition:

Maxims were initially considered teaching aids that might exist outside the formal authority hierarchy.

Threat identified:

Allowing Maxims to exist outside the formal code could create an unofficial body of doctrine.

This could lead to:

- competing traditions of instruction;
- selective reliance on memorable sayings over governing text;
- factional differences between formalists and practitioners;
- the gradual acceptance of unauthorized slogans;
- uncertainty over whether teaching devices possess doctrinal weight;
- future introduction of other “rogue elements” outside the recognized structure.

Development:

Maxims were formally incorporated between Principles and Rules.

Current understanding:

A Maxim states a governing truth in memorable form.

It is:

- derived from a Principle;
- more concise and foundational than a Rule;
- intended for daily remembrance;
- capable of directing conduct before a specific Rule must be consulted;
- binding upon subordinate Rules.

A Rule may add specificity, conditions, limits, duties, or applications to a Maxim, but it may not contradict or reverse it.

Analogy:

The relationship resembles the manner in which subordinate law may add specificity to superior law without nullifying the superior authority.

Current status:

Current and central to the hierarchy.

Maxims are not merely explanatory teaching devices. They are recognized doctrinal authorities that teach and direct.

Entry 11 — Addition of Procedures

Earlier condition:

Rules were treated as the principal implementation level beneath Principles.

Problem identified:

Rules explain what must, must not, or may be done, but they do not always explain the authorized sequence for completing a particular task.

Development:

Procedures were formally distinguished from Rules.

Current understanding:

- A Rule establishes the required, prohibited, or permitted conduct.
- A Procedure establishes the approved step-by-step method for satisfying a Rule.

A Procedure derives from a Rule and may not alter the substantive command of that Rule.

Current status:

Current.

Entry 12 — Current Doctrinal Hierarchy

The present hierarchy is:

Normative Authority

1. Axioms
2. Principles
3. Maxims
4. Rules
5. Procedures

Interpretive Authority

1. Authorized Commentary and Interpretations

Delegated Implementation Authority

1. Implementation Documents

Conflict standard:

Where provisions cannot be harmonized, the higher-ranking authority shall control.

Dependency standard:

Each lower level must:

- derive from a recognized superior authority;
- remain consistent with the superior authority;
- add specificity without reversal;
- stay within its delegated jurisdiction;
- avoid creating powers or exceptions that the superior authority does not permit.

Current status:
Current and controlling as the working hierarchy.

Part V — Articles and Document Containers

Entry 13 — Removal of Articles from the Authority Hierarchy

Earlier condition:

Articles were placed within the doctrinal hierarchy and were expected to contain Principles, Definitions, and Rules.

Problem identified:

An Article cannot possess one fixed rank when it may contain multiple types of provisions with different authority levels.

An Article containing a Principle does not thereby become superior to a Rule in another location. The authority belongs to the classified provision, not to the page or container in which it appears.

Development:

Articles were removed from the authority hierarchy.

Current understanding:

Articles are organizational containers used to arrange related material into coherent instruction or explanation.

Probable best use:

Articles are most naturally suited to the Malone Primer, where they may organize:

- commentary;
- interpretation;
- historical analysis;
- arguments;
- applications;
- case studies;
- research;
- instruction.

Articles may discuss several doctrinal levels without themselves becoming an independent level of authority.

Current status:

Relocated from authority structure to document structure.

Part VI — Regulatory Framework

Entry 14 — Creation of the Regulations Framework

Earlier condition:

The Doctrine possessed normative categories but lacked a single formal apparatus for enumerating, locating, and citing each class of provision.

Development:

A dedicated `regulations/` section was created.

The regulations index is intended to serve as the principal entry point into the formal reference architecture of Malone Doctrine.

Purpose:

- identify the hierarchy of authority;
- organize governing provisions;
- prevent unclassified normative material;
- create stable references;
- establish uniform citation;
- support version control;
- distinguish code from explanation;
- enable future institutional compliance review.

Current status:

Current and newly adopted during this design session.

Entry 15 — Regulations and Schedules Distinction

Concept under development:

A distinction emerged between Regulations and Schedules.

Regulations

Regulations establish the governing framework, authority, relationships, interpretive standards, and rules of administration.

Schedules

Schedules contain the authoritative enumerated lists of actual doctrinal provisions.

Current proposed schedule system:

- Schedule A — Axiom Table
- Schedule B — Principle Table
- Schedule C — Maxim Table
- Schedule D — Rule Table
- Schedule E — Procedure Table

Function of the distinction:

Regulations explain how the system operates. Schedules contain the lists governed by that system.

Current status:

Adopted in principle, with final terminology and page structure still subject to confirmation.

Entry 16 — Tables as Reference Instruments

Development:

The five principal normative categories are expected to appear through standardized tables.

Purpose of tables:

- provide concise lookup;
- assign stable identifiers;
- display source relationships;
- make hierarchy visible;
- simplify cross-reference;
- record version status;
- support institutional application.

Possible identifiers include:

- A-1, A-2, A-3 for Axioms;
- B-1, B-2, B-3 for Principles;
- C-1, C-2, C-3 for Maxims;
- D-1, D-2, D-3 for Rules;
- E-1, E-2, E-3 for Procedures.

Current status:

Current design direction.

Tables are formatting and reference instruments. They do not create a separate level of authority.

Part VII — Revised Final Architecture

Entry 17 — Malone Doctrine as Normative Code

Malone Doctrine contains the governing normative code:

1. Axioms
2. Principles
3. Maxims
4. Rules
5. Procedures

These provisions establish the actual ethical obligations, standards, permissions, prohibitions, duties, and approved methods of conduct.

Current status:

Current.

Entry 18 — Malone Primer as Explanatory Code

The Malone Primer exists beneath Malone Doctrine as its explanatory companion.

It may contain:

- authorized commentary;
- authoritative interpretations;
- historical accounts;
- revision records;
- drafting rationale;
- essays;
- research;
- arguments;
- applications;
- case studies;
- implementation examples;
- accounts of doctrinal development.

Authority limitation:

The Primer may interpret and explain Doctrine, but it may not amend normative code by explanation alone.

Where Commentary reveals that normative language is incomplete or defective, the governing provision must be formally revised.

Current status:

Current and refined.

Entry 19 — Institutional Implementation Layer

Individual Malone institutions may create implementation documents applying Doctrine to their particular responsibilities.

These may include:

- institutional policies;
- operating manuals;
- training programs;
- compliance systems;
- operational plans;
- institutional procedures;
- forms;
- checklists;
- response plans;
- threat-specific implementation documents.

Authority limitation:

Implementation documents may bind persons and programs within their proper jurisdiction, but they remain subordinate to:

- Procedures;
- Rules;
- Maxims;
- Principles;
- Axioms.

They may not rewrite the Doctrine or use institutional necessity as a basis for contradiction.

Current status:

Current.

Part VIII — Functional Language

Entry 20 — Final Functional Formulations

The current architecture is summarized by the following functional language:

- **Axioms establish.**
- **Principles govern.**
- **Maxims teach and direct.**
- **Rules command.**
- **Procedures execute.**

- Commentary interprets and preserves intent.
- Implementation documents apply.
- Articles organize and explain.
- Schedules enumerate.
- Tables enable lookup.
- Volumes define ethical domains.
- The Primer explains the Doctrine.

Current status:

Current.

These formulations are concise summaries rather than substitutes for the complete explanatory descriptions of each component.

Part IX — Applied Civil Strategy

Entry 21 — Separation of Normative Judgment from Strategy

Earlier condition:

Some early articles attempted to combine ethical principles with:

- problem diagnosis;
- threat analysis;
- tactics;
- implementation plans;
- metrics;
- economic strategy;
- community operating systems.

Development:

The Doctrine's broader intellectual process was clarified as:

Evidence → Diagnosis → Interpretation → Normative Judgment → Implementation

Current division:

- Normative judgment belongs primarily in Malone Doctrine.
- Research, diagnosis, interpretation, and strategic explanation belong primarily in the Malone Primer.
- Institution-specific execution belongs in implementation documents.

Reason:

Principles and Maxims must remain concise enough to serve as governing standards. They should not be overloaded with evidence, historical argument, threat analysis, or tactical planning.

Current status:**Current.**

The earlier operating overview already recognized that Principles belong in concise normative code while research, strategy, threat analysis, and implementation generally belong in Commentary, the Primer, or subordinate operational documents.

Part X — Version Control and Legitimacy

Entry 22 — Formal Revision and Provenance

Adopted requirement:

Every authoritative revision should record:

- what changed;
- why the revision became necessary;
- what earlier language it replaces;
- how governing meaning was affected;
- how the revised provision should be read;
- the date of adoption;
- the authority approving the revision;
- the provisions and documents affected.

Superseded versions:

Earlier versions remain available as provenance records but cease to possess controlling authority after formal replacement.

Purpose:

This prevents later generations from:

- treating obsolete wording as current law;
- erasing the history of development;
- disputing why a change occurred;
- using Commentary to conceal substantive amendment;
- claiming that an earlier draft possesses equal authority.

Current status:**Current.**

The earlier operating overview establishes transparent revision and preservation of superseded versions as essential to doctrinal legitimacy.

Part XI — Current Controlling Architecture

Normative Code

Malone Doctrine

1. Axioms
2. Principles
3. Maxims
4. Rules
5. Procedures

Interpretive and Explanatory Code

Malone Primer

- Authorized Commentary
- Interpretations
- Historical Accounts
- Revision Records
- Drafting Rationale
- Essays
- Research
- Arguments
- Applications
- Case Studies

Delegated Application

Malone Institutions

- Policies
- Manuals
- Training
- Compliance Systems
- Institutional Procedures
- Operational Plans
- Forms
- Threat Responses

Organizational Structure

- **Schedules** contain authoritative enumerated lists.
- **Tables** present provisions for reference and lookup.
- **Volumes** divide the Doctrine by ethical domain.
- **Articles** organize explanatory and instructional material.

- **Cross-references** connect related provisions and Commentary.
- **The Primer** explains and preserves the Doctrine.

Part XII — Superseded and Retained Concepts

Earlier concept	Current treatment	Status
Doctrine as a Defense Department program	Doctrine moved to Ethics Department	Superseded
Six-part Volume I architecture	Retained as source and provenance material	Superseded as controlling structure
Articles above Principles	Articles treated as containers	Superseded
Definitions as a separate doctrinal level	Function absorbed into Commentary	Removed
Maxims as unofficial teaching aids	Maxims formally ranked between Principles and Rules	Superseded
Rules as the final operational level	Procedures added beneath Rules	Refined
Doctrine and Primer separation	Preserved and clarified by regulatory framework	Current
Normative lists embedded across pages	Schedule and table system under development	Refined
Commentary as simple explanation	Expanded to interpretation, provenance, and version record	Refined
Implementation material within Principles	Moved to Primer or institutional documents	Superseded

Part XIII — Immediate Development Priorities

The current framework is sufficiently developed to support substantive drafting.

The next priorities are:

1. Finalize the language governing the hierarchy of authority.
2. Finalize the distinction between Regulations and Schedules.
3. Establish the standard fields used in each regulatory table.
4. Populate Schedule A with the fifteen published Axioms.

5. Begin systematic drafting of Principles.
 6. Derive Maxims from adopted Principles.
 7. Derive Rules from Principles and Maxims.
 8. Develop Procedures only where Rules require a standardized method of execution.
 9. Create linked Commentary records within the Malone Primer.
 10. Establish revision and provenance fields for every authoritative provision.
 11. Define citation conventions for schedules, tables, and individual provisions.
 12. Prevent Articles, essays, slogans, training materials, or institutional customs from acquiring unofficial authority outside the recognized hierarchy.
-

Current Assessment

Malone Doctrine has evolved beyond a collection of ethical positions and beyond the earlier concept of a book-like doctrinal project.

It is now developing as a layered system containing:

- a supreme normative code;
- a formal hierarchy of authority;
- a regulatory reference framework;
- authoritative schedules and lookup tables;
- a subordinate explanatory Primer;
- delegated institutional implementation;
- version control;
- provenance preservation;
- a four-volume field of ethical responsibility.

The most important development of the present session is not the creation of the separation between Doctrine and Primer. That separation had already been established.

The present session instead clarified the internal machinery supporting that separation by:

- formalizing Maxims within the authority hierarchy;
- adding Procedures as a distinct operational level;
- removing Definitions as an independent component;
- relocating Articles outside the authority hierarchy;
- distinguishing normative, interpretive, and delegated implementation authority;
- introducing the Regulations framework;
- developing the concept of Schedules A through E;
- identifying Tables as the permanent lookup instruments of the normative code;
- restating the relationship between Malone Doctrine, Malone Primer, and Malone institutions.

The current task is therefore no longer to determine whether Malone Doctrine should possess a coherent structure. The task is to populate the structure with authoritative content while preserving the dependency, provenance, and limitations established by the framework.
